

# 1<sup>st</sup> ICCMO INDIA CONGRESS

India's Step Forward in the Neuromuscular Dentistry Revolution

**“Measuring Occlusion and Muscle Physiology”**

DATE : 25<sup>TH</sup> & 26<sup>TH</sup> AUGUST 2018 | VENUE : THE CAPITOL, BANGALORE

Dental malocclusions are at the root of many of a dentist's frustrating dental problems. Understanding how digital occlusal technology can help change the physiologic strain of a malocclusion is the key to getting patients better. Dr. Curtis' approach is to look at how a patient's malocclusion first creates a problem and then how to use T-Scan technology to resolve the problem.

We believe that dentists need to be leaders on the forefront of treating their patients' occlusal physiology. As dentists we have a unique perspective on the most finely tuned touch organs of the body - the teeth

Using biometric tools, Dr. Curtis teaches, both the new and the expert NMD equipment user, the diagnosis and treatment of malocclusions. From how to treat simple every day dental problems all the way to how to solve the complex TMD pain patient
